#### **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1-3, 5-13, 15-39 are rejected under 35 U.S.C. 102(b) as being anticipated by Segen, US 6,072,504.

Re claim 1, Segen discloses a method for generating a depth map used to render objects (fig. 2, Summary Of The Invention) comprising:

establishing a virtual camera (col. 2, line 67 to col. 3, line 8, col. 10, lines 41-54) using camera data of a tracked camera which defines a viewpoint for a synthetic scene (fig. 2, col. 9, lines 7-28, in this segment, actual tracked camera(s) are 120,130 in fig. 2, camera data are ball trajectories, viewpoints, etc..., synthetic scene is the animated version of live action event);

setting the field of view of the virtual camera to the field of view of the tracked camera (col. 10, lines 41-54);

positioning a synthetic tracked object in the scene according to position information of the tracked object (col. 9, lines 29-65);

Art Unit: 2613

and extracting depth information of the positioned synthetic tracked object to generate depth map (fig. 3: 225, col. 9, lines 7+, in this segment, the three-dimensional model is the generated depth map).

Re claim 2, the method as set forth in claim 1, wherein the synthetic scene comprises a three dimensional model of an environment (col. 9, lines 7+).

Re claim 3, the method as set forth in claim 1, wherein extracting further comprises extracting depth information of the synthetic scene (col. 9, lines 42-65, in this segment, creating player models from a synthesized composite model is in effect extracting depth information of the synthetic scene).

Re claim 5, the method as set forth in claim 1, wherein establishing further comprises re-positioning the virtual camera as the tracked camera changes (col. 10, lines 7-33, in this segment, tracking live ball and player positions so that an animated i.e., synthesized version of these positions are also being tracked is in effect repositioning the virtual camera of the tracked camera).

Re claim 6, the limitations as required in claim 6 have been analyzed and rejected with respect to claims 1-5 above.

Art Unit: 2613

Re claim 7, the limitations as required in claim 7 have been analyzed and rejected with respect to claims 1-5 above.

Re claim 8, the method as set forth in claim 6, further comprising combining the synthetic tracked object with the live scene using depth information stored in the depth map (col. 6, lines 28-33, col. 9, lines 20-28, col. 10, lines 34-54, in this segment, an animated version of a live action game can be used in conjunction with a live televised broadcast of the game).

Re claim 9, the method as set forth in claim 8, further comprising using image segmentation to align the depth map in accordance with real edges in the live scene (fig. 3: 230, 235, col. 7, lines 15-67).

Re claim 10, the limitations as required in claim 10 have been analyzed and rejected with respect to claims 1, 6 and 8 above.

Re claim 11, the method as set forth in claim 1, wherein the depth map is further refined by distorting grid coordinates of the depth map based upon characteristics of the tracked camera which defines the field of view (col. 8, lines 1-33, in this segment, interpolating missing data points near or at a point of alteration is in effect a refinement step as claimed).

Art Unit: 2613

Re claims 12-13, 15-21, these claims are apparatus corresponding to method claims 1-3, 5-11 above. Thus, they have been analyzed and rejected with respect to claims 1-3 and 5-11. Segen discloses both a method and apparatus (see Summary Of The Invention).

Re claims 22-30, these claims are apparatus corresponding to method claims 1-3, 5-11 above. Thus, they have been analyzed and rejected with respect to claims 1-3 and 5-11. Segen discloses both a method and apparatus (see Summary Of The Invention).

Re claims 31-39, these claims are computer readable medium executed by a processing system to perform the method with steps corresponding to method claims 1-3, 5-11 above. Thus, they have been analyzed and rejected with respect to claims 1-3 and 5-11. Segen discloses both a method and apparatus (see Summary Of The Invention), and also discloses hardware capable of executing software (col. 4, lines 1-21).

## Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 4 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Segen, US 6,072,504.

Art Unit: 2613

Re claim 4, Segen discloses implementation of the invention to a live action sporting event, but preferably to an environment of a tennis match (fig. 2, also Summary Of The Invention). However, it would have been reasonable to one skilled in the art to expect his invention applicable to an environment of a race track as required in claim 4, since a race track would have encompassed a particular live action sporting event as disclosed in Segen. Therefore, a race track would have fall under an obvious preferential design choice in view of the teaching of Segen.

Re claim 14, the claim pertains to an apparatus claim corresponding to the method claim 4 above. Thus, it has been analyzed and rejected with respect to claim 4. Segen discloses both a method and apparatus (see Summary Of The Invention).

#### Contact

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Vu Le whose telephone number is 703-308-6613. The examiner can normally be reached on M-F 8:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chris Kelley can be reached on 703-305-4856. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
